

Company description

Nexeon is a UK-headquartered battery material and licensing company focussed on delivering innovative and cost effective silicon anode materials that enable significantly better batteries. Nexeon works with OEMs and battery companies to enable next generation lithium-ion batteries, and has an established application engineering facility in Yokohama, Japan. The company's materials are made with manufacturing scalability and sustainability in mind.

Nexeon has filed a sequence of patents and has developed manufacturing processes to produce materials sustainably and cost effectively using readily available starting materials. Benefits of Nexeon's technology include ease of use and increased cell capacity. Nexeon supports its customers by providing commercially and statistically relevant cell data from its 18650 and pouch cell prototype lines.

Product samples are available from the company in kg quantities.
